

PolymerFX™ has passion for creating beautiful floors. The co-founders have over forty-five years of combined experience in product development, manufacturing and selling high performance coatings. We offer different components for our PolymerFX™ Flake Floor depending on the projects needs. They are as follows:

1. Top Coat: Our standard top coat is a Polyaspartic, which is up to 5 times more abrasion resistant than a typical industrial grade epoxy top coat and up to 20 times more abrasion resistant than a typical DIY epoxy. Exterior applications may require an additional top coat.
2. Our Polyurea primer/base coat is used in cold weather installations, one day installations and quick return to service projects.
3. Our Epoxy primer/base coat is used on warmer weather installations, 2 day installations or when moisture issues are present in the concrete substrate.

BEAUTIFUL DURABILITY

PolymerFX Flake Flooring has many different looks such as natural stone, terrazzo, granite and colorful options to match company logos or favorite sports teams

A high performance Polyapartic top coat provides a surface that has excellent abrasion resistance and is seamless, making it easy to clean. It will not yellow or fade and is resistant to oil, grease, salt and a number of different chemicals.

ULTIMATE VERSATILITY

Decorative Flake Flooring offers endless color design blends and can be used for a wide variety of flooring applications. Such as:

RESIDENTIAL APPLICATIONS

- Garage Floors
